

CASETRACKERLAW

Casetrackerlaw is a software program specifically designed to streamline and automate a collection firm's business. Casetrackerlaw automates each major step of a collection firm's business, including debt placement, debt recovery, business management and administration.

Casetrackerlaw is portable and completely scalable software that can operate for collection firms small to medium. Furthermore, Casetrackerlaw is also a marketing tool that attracts more business and new accounts for a collection firm. Casetrackerlaw has been demonstrated to significantly increase the success rate of attracting new accounts from creditors, forwarders and clients.

The beauty of Casetrackerlaw innovation is the simplicity and ubiquity of web based access, by embracing the Internet and web technology for application to the claims management industry. No other software solution to the claims management industry can accomplish these features, because they are centralized (i.e., single workstation) solutions prohibiting the usage across distributed enterprise.

Some of the key features are:

Reminders

Casetrackerlaw can be programmed to send automatic email messages to all users informing them about their claim reminders and tasks assigned to them.

Reporting

Casetrackerlaw provides numerous reports to support the management of your claims. These include claims received report, claim status report, overdue reports, track cases based on collectors, promised payment report and client performance report.

Multi Level Trust Accounting

Casetrackerlaw maintains a three level trust accounting. It gives you the ability to view transactions at a claim level, creditor or forwarder level, as well as for all the claims in the system. It handles debtors payments, collection fees, client payments, and suit fees effectively.

Claim Forwarding

Casetrackerlaw allows you to forward claims to local attorneys who have knowledge of all state and local collection laws. The system also gives you the ability to bulk forward claims to attorneys.

Importing Claims

You can receive from your clients in YGC, NCO, ASCII delimited or any proprietary EDI formats. We develop custom interfaces to accommodate any interfaces that may be required.

Status Updates

Casetrackerlaw notifies the administrators of updates on each and every account. It automatically sends an email notification immediately after an update. It allows the firm to notify clients on the status of the claim.

Speed-Chex Interface.

You can accept checks over the phone. Speed-Chex processing integrates completely with Casetrackerlaw. Transactions are processed in real time and your account is funded within 24 to 48hrs.

Claim Search

Casetrackerlaw provides you with the ability to search debtors and claims in your system when only partial information is provided.

The CASETRACKERLAW DIFFERENCE

Usage

Up to 25k claims and 100 network users are permitted in this version.

Customization

Casetrackerlaw can be tailored to suit the way you manage your business. We at Casetrackerlaw, realize that every firm uses its own collection strategies, reports, demand letters, collectors commissions and invoices.

Security

Security and privacy is critical to any debt recovery business. A key feature of Casetrackerlaw is the level of security that it builds around the claim information.

Value for Money

Our long term commitment and low over head allows us to provide a quality product at competitive prices. We provide excellent technical support and free hands on training to all our clients.

Reputation

Don't take our word for it- ask our clients. Casetrackerlaw has an extensive list of references drawn from a long track record of success.

Accounting and Balance Calculations

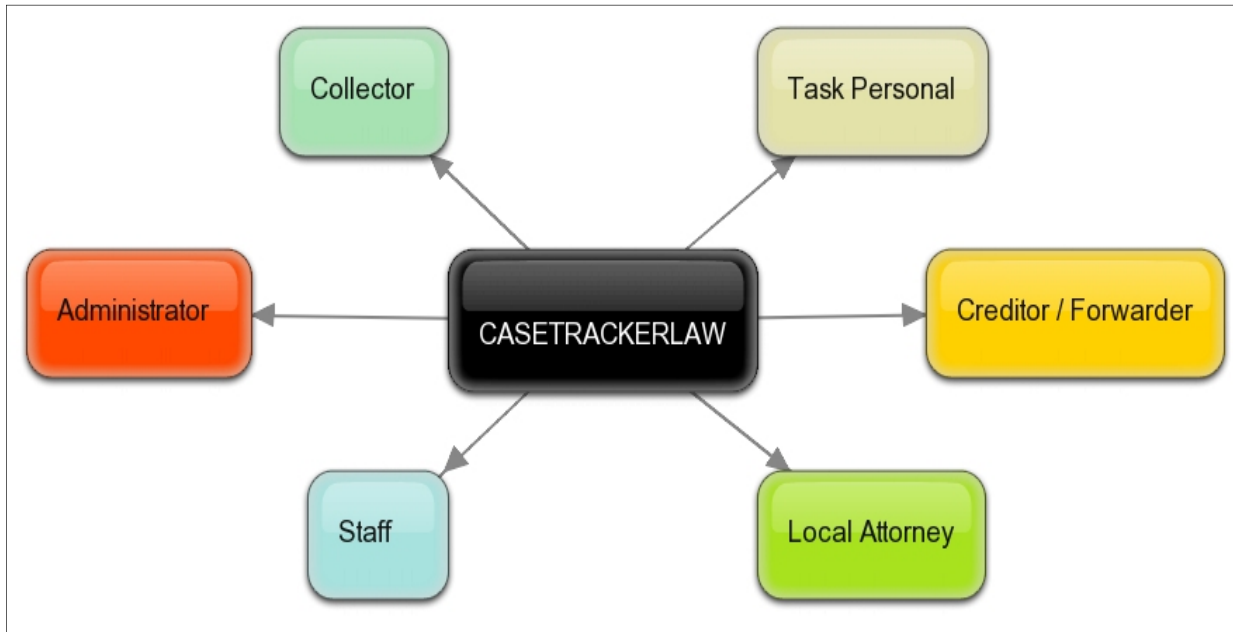

Casetrackerlaw automatically calculates outstanding balances, accrued interest, and how each payment is allocated between principal, interest accrued, and costs. When a payment is made, it automatically calculates the collection fees and the amount to be remitted to the client.

Document Generation

Casetrackerlaw has letter generation wizard which allows users to generate letters from within the claims. The letter wizard allows users to create their own letters. Casetrackerlaw also allows you to generate Court Forms / Pleadings, Correspondence Letters and Interface with Document Mailers systems.

Role Based Access

Casetrackerlaw allows you to create users with different roles and different functionality. The diagram below shows you different roles available.

Document Imaging

Casetrackerlaw has a document storage and retrieval management section that allows attaching documents, correspondences, memos and any other documents or images to the respective claims. All team members will be able to access this information at any time, depending upon who is working on which particular claim at any given time. The software also allows Clients, Attorneys and Collectors to communicate and transfer documents on these cases. Direct and sub-group transfers enhance claims processing efficiency.

Integrated Faxing capabilities

You can fax documents, demand letters or any documents attached to your claims. You will receive an email notifying whether or not the fax went through.

Linking Related Claims

Casetrackerlaw allows you to link claims which are related to each other.
